ANTHONY NZE

ENTRY-LEVEL CLOUD & DEVOPS | ASPIRING DEVOPS ENGINEER

Port Harcourt, Nigeria | 07045457632 | anthonynze.devops@gmail.com
LinkedIn | GitHub

PROFESSIONAL SUMMARY

Marine Engineering undergraduate at Rivers State University building a career in Cloud and DevOps. Developing practical skills through structured training and hands-on labs in AWS, Linux, Bash, Docker, Git and GitHub. Has practised launching and working with AWS EC2 instances, hosting a website, writing basic automation and monitoring scripts, and building a browser-based DevOps learning project. Seeking an internship, entry-level opportunity or junior role to contribute, learn and grow in cloud infrastructure and automation.

TECHNICAL SKILLS

Cloud: AWS EC2, basic AWS website hosting and cloud virtual-server practice

Linux & scripting: Linux command line, user administration, Bash scripting (basic), Python (basic)

Containers & automation: Docker container fundamentals; Ansible and Terraform (foundational learning)

Version control & delivery: Git, GitHub, CI/CD fundamentals, Jenkins (foundational learning)

Other foundations: Computer networking, Kubernetes, DevOps fundamentals and monitoring concepts

SELECTED PROJECTS

Node Health Monitoring Script | GitHub Repository

Tools: Linux, Bash, grep, awk, pgrep, SSH / AWS EC2 practice

- Built a Bash-based utility to practise checking server health, including CPU, memory and disk usage.
- Added checks for processes or services and basic network connectivity to help identify common system issues.
- Practised running and troubleshooting the script in a Linux environment, strengthening shell scripting and system-monitoring skills.

DevOps Level Up – Interactive Learning Platform | Live Website | GitHub

Tools: HTML, CSS, JavaScript, Git, GitHub Pages

- Created a browser-based learning experience that introduces DevOps concepts through interactive missions and a simulated terminal.
- Developed the page structure, responsive styling and JavaScript interactions for mission progress and simulated command tasks.
- Published the project using GitHub Pages and practised version control and static-site deployment.

AWS EC2 & Linux Administration Labs

Tools: AWS EC2, Ubuntu Linux, SSH

- Practised launching cloud virtual machines, connecting to Ubuntu instances over SSH and performing basic Linux administration.
- Worked through Linux user-management and server-access exercises while learning the basics of cloud infrastructure.

Docker Containerization Practice

Tools: Docker

- Created and worked with Docker containers to practise application-containerization fundamentals.

TRAINING

LivingWorth Academy — DevOps Training | In progress

Learning areas include DevOps fundamentals, Linux and Bash, networking, AWS, Git and GitHub, Ansible, Terraform, CI/CD, Jenkins, Jira, Docker, Kubernetes and monitoring.

EDUCATION

Rivers State University — Marine Engineering

Undergraduate, 400 Level | Expected graduation: 2028

Project descriptions reflect practical learning and personal work; foundational topics are identified as learning areas.
